## Migraine Triggers

Triggers do not cause migraines but they can help to bring on an attack. They vary from person to person so knowing your triggers can help to reduce the instances of your migraines.

Triggers can have an effect up to 72 hours prior to onset of a migraine. Make sure to evaluate the sequence of events up to 3 days before a migraine.

Avoid looking at triggers in isolation. Sometimes combinations of triggers can be responsible for bringing on an attack.

Remember, no list is exclusive and that food is not the only aspect that you should watch carefully. The majority of attacks are brought on by non-dietary factors. Make a note of anything that you may even vaquely suspect.
